

## 533 FIBERGLASS LIGHT PUTTY

TIME  
SAVING

- High elasticity
- Time efficient, fast to apply, short drying time
- Can be sanded after only 20 min
- Good stability, even on vertical surfaces
- Excellent adhesive properties
- Easy to sand, even after longer period of time
- Very smooth application
- Excellent filling properties

- New fiberglass light putty is a new product with unique characteristics
- It weighs almost half of ordinary putty and this helps to avoid extra weight on the repaired part
- Because of its unique fillers it does not create pores
- It is easy to sand, it has high elasticity and excellent adhesive properties to different materials
- Can be easily sanded down to zero
- No need for additional fine putty application, can directly be overcoated with filler primer
